

Wisam Ahmed

Backend Developer — Laravel · NestJS

+92 327 2954532 | Wisamahmed851@gmail.com | [linkedin.com/in/wisam-ahmed-875248309](https://www.linkedin.com/in/wisam-ahmed-875248309) | github.com/wisamahmed851

Professional Summary

Backend Developer with 2+ years of experience building scalable APIs, marketplace systems, CMS platforms, and real-time applications using Laravel, NestJS, ASP.NET Core, MySQL, PostgreSQL, and SQL Server. Experienced in designing RESTful architectures, implementing WebSockets, queue-based processing, caching strategies, and database optimization. Strong focus on clean architecture, performance optimization, secure API development (JWT, Sanctum, role-based access control), and maintainable backend systems deployed in production environments. Experienced with Docker for containerized development and unit testing using PHPUnit and Jest.

Key Skills

Laravel, NestJS, ASP.NET Core, PHP, JavaScript, TypeScript, REST APIs, JWT, Docker, Redis, PostgreSQL, MySQL, SQL Server, WebSockets, Queue Processing, Unit Testing (PHPUnit, Jest), Repository Pattern, Service Layer, Role-based Access Control, API Security, Microservices, Git, Firebase Cloud Messaging

Technical Skills

- **Languages:** PHP, JavaScript, TypeScript, SQL, C#
- **Backend Frameworks:** Laravel, NestJS, Express.js, ASP.NET Core, FastAPI
- **Frontend:** React.js, HTML, CSS, JavaScript
- **Databases:** MySQL, PostgreSQL, SQL Server, Firebase, Supabase
- **Architecture & Concepts:** REST APIs, MVC Architecture, Repository Pattern, Service Layer, Authentication & Authorization (JWT, Sanctum), Queue Processing, WebSockets, Unit Testing (PHPUnit, Jest), Microservices
- **Tools & Platforms:** Git, GitHub, Docker, Postman, Redis, Pusher, Firebase Cloud Messaging (FCM), AWS (S3), API Security

Professional Experience

Mid-Level Backend Developer — Bidec Solutions

March 2023 – Present Karachi, Pakistan

Progressed from Backend Developer Intern → Junior → Mid-Level through consistent delivery and technical growth.

- Architected and built scalable backend modules using Laravel and NestJS for marketplace, CMS, and enterprise business platforms serving thousands of concurrent users.
- Built and maintained 30+ RESTful API endpoints powering marketplace, CMS, and ride-sharing platforms, reducing average API response time by approximately 25% through query tuning and caching.
- Enforced secure API authentication and authorization using JWT and Laravel Sanctum, applying role-based access control across multi-tenant platform features.
- Applied service-layer and repository-pattern architectures across 15+ modules, cutting code duplication by 30% and improving testability; wrote 100+ unit tests using PHPUnit and Jest to ensure reliability.
- Optimized database performance through query tuning, indexing strategies, and efficient schema design across MySQL, PostgreSQL, and SQL Server, reducing query execution times by up to 40%.
- Executed caching with Redis, queue workers, and background job processing to improve system responsiveness and reduce request latency across high-traffic endpoints.
- Utilized Docker for containerized local development environments, streamlining onboarding and ensuring environment consistency across the team.
- Coordinated with a cross-functional team of 8+ frontend developers, QA engineers, and product managers to ship 10+ production features; directed 20+ code reviews and mentored 3 junior developers.

Key Production Projects

Ma'rood Marketplace Platform

Laravel, MySQL, Queues, REST APIs, Redis

- Engineered a scalable multi-category marketplace platform supporting listings, bidding, purchases, jobs, motors, property, and services — handling 5,000+ active listings across 10+ categories.
- Delivered RESTful APIs, role-based access control, multilingual content management, and asynchronous processing using Laravel Queues, reducing background job processing time by 30%.
- Guided backend implementation using service-layer architecture and database optimization, resulting in a 35% improvement in average API response time under peak load.

Ride n Share

NestJS, PostgreSQL, Redis, WebSockets, FCM

- Built backend services for ride booking, driver management, trip lifecycle workflows, and real-time ride tracking, supporting 1,000+ concurrent WebSocket connections.
- Integrated WebSockets, Firebase Cloud Messaging (FCM), and REST APIs for live ride updates and push notifications, achieving sub-200ms message delivery latency.
- Integrated Redis caching to reduce database load by 40% and improve response times for frequently accessed ride and driver data.

Bidec Solutions CMS Platform

Laravel, MySQL, SEO

- Created a CMS platform enabling dynamic content management, publishing workflows, and page administration for 50+ managed content pages.
- Rolled out SEO-focused features including metadata management, URL optimization, canonical redirects, and structured content — improving page indexing efficiency.
- Built reusable content modules and optimized backend processes for long-term maintainability and scalability.

Nehlum CMS Platform

NestJS, PostgreSQL, REST APIs

- Designed backend architecture for a CMS platform supporting structured content management and dynamic page generation with modular, reusable service components.
- Designed scalable REST APIs and modular services, reducing duplicate business logic by approximately 40% through reusable backend components.
- Managed backend implementation that improved development velocity for new feature additions by standardizing service patterns across the platform.

Education

Bachelor of Data Science	Expected Graduation: 2030	2026 – Present
Currently enrolled, full-time online program — Pakistan		
Advanced Diploma in Software Engineering		2023 – 2026
Pakistan
