

Wisam Ahmed

Full-Stack Developer — JavaScript · TypeScript · NestJS · React.js

+92 327 2954532 | Wisamahmed851@gmail.com | linkedin.com/in/wisam-ahmed-875248309 | github.com/wisamahmed851

PROFESSIONAL SUMMARY

Full-Stack Developer with 2+ years of experience building scalable APIs, marketplace systems, CMS platforms, and realtime applications using JavaScript, TypeScript, NestJS, Node.js, Laravel, and React.js across the stack. Experienced in designing RESTful architectures, integrating front-end interfaces with backend services, implementing WebSockets, queue-based processing, and caching strategies. Strong focus on writing readable, reusable, and maintainable code, performance optimization, and secure API development (JWT, Sanctum, role-based access control). Comfortable benchmarking system performance, analyzing results for continuous improvement, and producing clear technical rationale, with experience mentoring junior developers and collaborating across cross-functional teams. Experienced with Docker for containerized development and unit testing using Jest and PHPUnit.

KEY SKILLS

JavaScript, TypeScript, Node.js, NestJS, React.js, Laravel, ASP.NET Core, REST APIs, JWT, Docker, Redis, PostgreSQL, MySQL, SQL Server, WebSockets, Queue Processing, Unit Testing (Jest, PHPUnit), Repository Pattern, Service Layer, Role-based Access Control, API Security, Microservices, Git, Firebase Cloud Messaging

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, SQL, C#

Backend Frameworks: Node.js, NestJS, Express.js, Laravel, ASP.NET Core, FastAPI

Frontend: React.js, HTML, CSS, JavaScript, TypeScript

Databases: MySQL, PostgreSQL, SQL Server, Firebase, Supabase

Architecture & Concepts: REST APIs, Full-Stack Integration, MVC Architecture, Repository Pattern, Service Layer, Authentication & Authorization (JWT, Sanctum), Queue Processing, WebSockets, Unit Testing (Jest, PHPUnit), Microservices

Tools & Platforms: Git, GitHub, Docker, Postman, Redis, Pusher, Firebase Cloud Messaging (FCM), AWS (S3), API Security

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Backend-Focused) — Bidec Solutions *March 2023 – Present Karachi, Pakistan*

Progressed from Developer Intern → Junior → Mid-Level through consistent delivery and technical growth across backend and full-stack feature work.

- Architected and built scalable backend modules using Node.js-based NestJS and Laravel, integrating with React.js front-end components for marketplace, CMS, and enterprise business platforms serving thousands of concurrent users.
- Built and maintained 30+ RESTful API endpoints and their front-end integrations powering marketplace, CMS, and ride-sharing platforms, reducing average API response time by approximately 25% through query tuning and caching.
- Enforced secure API authentication and authorization using JWT and Laravel Sanctum, applying role-based access control across multi-tenant platform features consumed by JavaScript/TypeScript client applications.
- Applied service-layer and repository-pattern architectures across 15+ modules, cutting code duplication by 30% and improving testability; wrote 100+ unit tests using Jest and PHPUnit spanning backend and front-end code to ensure reliability.
- Optimized database performance through query tuning, indexing strategies, and efficient schema design across MySQL, PostgreSQL, and SQL Server, reducing query execution times by up to 40%.
- Executed caching with Redis, queue workers, and background job processing to improve system responsiveness and reduce request latency across high-traffic endpoints.
- Utilized Docker for containerized full-stack development environments, streamlining onboarding and ensuring environment consistency across the team.
- Coordinated with a cross-functional team of 8+ frontend developers, QA engineers, and product managers to ship 10+ full-stack production features; directed 20+ code reviews, benchmarked feature performance, and mentored 3 junior developers.

KEY PRODUCTION PROJECTS

Ma'rood Marketplace Platform *Laravel, React.js, MySQL, Queues, REST APIs, Redis*

- Engineered a scalable multi-category marketplace platform supporting listings, bidding, purchases, jobs, motors, property, and services — handling 5,000+ active listings across 10+ categories.
- Delivered RESTful APIs, role-based access control, multilingual content management, and asynchronous processing using Laravel Queues, reducing background job processing time by 30%.
- Collaborated on integrating React.js front-end components with backend REST APIs to support a seamless browsing and bidding experience, using service-layer architecture and database optimization that improved average API response time by 35% under peak load.

Ride n Share *NestJS (Node.js), React.js, PostgreSQL, Redis, WebSockets, FCM*

- Built backend services for ride booking, driver management, trip lifecycle workflows, and real-time ride tracking, supporting 1,000+ concurrent WebSocket connections.
- Integrated WebSockets, Firebase Cloud Messaging (FCM), and REST APIs with React-based client interfaces for live ride updates and push notifications, achieving sub-200ms message delivery latency.
- Integrated Redis caching to reduce database load by 40% and improve response times for frequently accessed ride and driver data.

Bidec Solutions CMS Platform *Laravel, React.js, MySQL, SEO*

- Created a CMS platform enabling dynamic content management, publishing workflows, and page administration for 50+ managed content pages via a React-based admin interface.
- Rolled out SEO-focused features including metadata management, URL optimization, canonical redirects, and structured content — improving page indexing efficiency.
- Built reusable content modules and optimized backend and front-end processes for long-term maintainability and scalability.

Nehlum CMS Platform *NestJS (Node.js/TypeScript), React.js, PostgreSQL, REST APIs*

- Designed backend architecture for a CMS platform supporting structured content management and dynamic page generation with modular, reusable service components consumed by a JavaScript/TypeScript front end.
- Designed scalable REST APIs and modular services, reducing duplicate business logic by approximately 40% through reusable backend components.
- Managed backend implementation that improved development velocity for new feature additions by standardizing service patterns across the platform.

EDUCATION

Bachelor of Data Science — Currently enrolled, full-time online program, Pakistan (2026 – Present, Expected Graduation: 2030)

Advanced Diploma in Software Engineering — Pakistan (2023 – 2026)
